QUALITY OF KAWASAKI SPORT WITH PASSION

BRAND CULTURE

INTRODUCTION

A

Kawasaki Sports Industry was founded in 1915 and is one of the World's leading brands for Badminton and Tennis series.

Shenzhen Chuanqi (Kawasaki) Sports Co., Ltd., was established in 2002, is an international sporting goods company. It's R & D based in the Asia Pacific region. It mainly specializes in tennis & badminton sporting goods such as badminton racket, tennis racket, sportswear, sports shoes, shuttlecocks and bags etc.

In 2009, The international top badminton coach Li Mao was invited as the global technical consultant of Kawasaki.

In 2013, Chuanqi (Kawasaki) established Kawasaki International Badminton Club in Malaysia.

In 2014, Kawasaki International Badminton Club moved to Shenzhen, China.

The company's development concept is proactive and has been leading in badminton filed.

COMPANY VISION

B

Being An Outstanding Sports Enterprise in Sports Industry.

COMPANY MISSION

C

Bring healthy and happy life to people, and make contributions to social progress.

COMPANY SPIRIT

D

HONESTY, INNOVATION, EFFICIENCY, COOPERATION

HONESTY: Reliable and Modest

INNOVATION: Creativity and Unique

EFFICIENCY: Practical and Implementation

COOPERATION: United and Win-Win

SENSE OF VALUE

E

D&R, production and selling top quality products for customers.

Honesty, reliability and modesty are our important moral values.

Keeping on innovating and improving is the source of our company development.

Trying our best to offer our customers and partners best service Exceeding their EXPECTATIONS is our most important duty.

Respecting everyone, cooperating with sincerity and creating a better world to live together.

History of

2022

Today, the fifth generation "Kawasaki" Carbon Technology is used to create world's top rackets, which are used by world's top players

2020

Players Malkov won the championship in Russian championship.
Players Sheng Xiao Dong won the championship in Iran international challenge.

2019

Kawasaki badminton Global Technical Consultant
Head Coach of Men's singles of China Badminton Team.

Kawasaki brand signed "Herasen badminton team"

2015

Kawasaki 100 Years Birthday

Kawasaki brand already has 100 Years history.

2013

Foundation of Kawasaki International Badminton Club

Kawasaki established Kawasaki International Badminton Club in Malaysia.

2017

Kawasaki player Malkov Vladimir won silver medals in 2017 Russia Open and 2017 European Championships.

2002

Kawasaki Foundation in China

Kawasaki Set up China Oversea agent.

1972

Foundation of Korean Factory

Kawasaki established Korea Kawasaki Co.Ltd to Produce more rackets, with quantity over 3,000pcs monthly. During that period, Kawasaki had total 250,000pcs rackets produced in Japan, Taiwan and Korea every month and was the top producer in the world.

1973

The Creation of Carbon Racket

In 1973, the world first carbon racket named "Ruler" was created by Kawasaki, which opened a new era for whole carbon racket industrial.

1968

Foundation of Taiwan Factory

Kawasaki established Taiwan Kawasaki Co.Ltd to produce more rackets, with wooden rackets quantity over 100,000pcs and Aluminum rackets over 30,000pcs monthly.

1963

Foundation of Japanese Factory

Kawasaki established Kawasaki Racket Co.Ltd to produce wooden rackets in Saitama Prefecture of Japan, and set up Tennis and badminton rackets production system.

1960

Global Promotion

Kawasaki has established agents in Singapore, Denmark, Switzerland.

1915

Brand Foundation

Kawasaki Brand was founded in Tokyo by カワサキ, きもち きちたろう in 1915, and then started to produce and sell wooden rackets.

TECHNOLOGIES IN RACKET STRUCTURE

HEXAGON FRAME STRUCTURE

Through mathematical model analysis, we have created a new hexagon frame structure based on traditional stable frame, which makes the racket surface is more stable with sharper feeling .

AEROFOIL frame

Rounded smooth airfoil structure can efficiently reduce the powerful wind-breaking and improve swing speed.

TRAPEZIUM FRAME

The sharp trapezoidal structure helps users to improve swing speed, and effectively enhances the structural strength of the racket frame, allowing the users to control balls more precisely and hit them more accurately.

HEXAGONAL FRAME

Provide powerful wind-breaking support which enhances the racket strength effectively, and improves the accuracy of controlling and hitting .

BOX FRAME

Thick and strong box-shaped frame greatly improves the racket frame, provides high torque support for the racket, and greatly enhances control of the racket.

FOURTH MOLDING TECH

The innovative four molding structure is a newly developed method highly suitable for offensive rackets . The racket frame is independently internally foamed, and the built-in solid carbon T head and the middle rod of the racket are independently formed. After the separately formed parts are assembled into a whole, a new type of steam high-pressure forming machine is used again to form a complete racket embryo. With this innovative molded badminton racket, the carbon fiber is more strong when smashing the racket, which makes fast speeding of the ball and flexible experience.

ACCURATE STIFFNESS SHAFT IN 360 DEGREES FREELY

In the production process of the shaft, Steel core with ultra-high vertical accuracy and smooth surface manufactured by high-precision machine tools, Wrapped Japanese original carbon forming .The whole shaft combined with multi-angle carbon and the surface 0° carbon yarn. And use high-precision "Centerless" grinding machine to polish the outer shaft ,The middle shaft thickness was well made by exquisite production, And it also has excellent performance of 360° elasticity.

TURBO FORCE

Optimize the eddy current wind resistance produced by the traditional wire groove in the swing, enhance the reaction speed and explosive force of the racket frame to the wire bed. At the same time, the curved wire groove has a natural physical R angle to help disperse the concentrated stress generated by the traditional right-angle wire hole. The body's tensile strength is stronger, the effective sweet spot of the thread bed is larger, and the effective return rate is improved.

T-JOIN POWER

Torsion is one of most important data for rackets level. King Series racket use Special T technology, shaft and frame connected seamlessly, which improves 35% of rackets torsion , smashing power more directly with clear sound. the racket surface is super stable, comprehensively improving the accuracy and explosive power of the racket.

MECH FRAME

Mech reinforced composite racket frame is developed after multiple tests through computer simulation to calculate the power area and directions when racket face is in impact, and can form support force automatically, with more stable, powerful and accurate characters for hitting.

SUPER SLIM SHAFT 6.0mm/6.5mm

The ultra-fine shaft, made of high rigid carbon fiber and combined with centerless grinding technology, brings a faster speed and a more delicate and flexible feel.

THICKENED nail

Thickened nail ,which is made of nylon material with rigid and strong physical properties. The racket with thickened nails can effectively reduce the damage of high pound hairline to the carbon fiber of the racket frame, and reduce the replacement frequency of the nails.

DESHT HANDLE CONNECTION PROCESS

The "DESHI" racket handle connection process is a unique combination process of racket rod, front cover and wooden handle, and is a handle connection scheme of Kawasaki brand's internal process innovation. In the badminton racket with this technology, the combination height of the middle rod and the wooden handle of the racket is close, reducing the loss of power caused by the vibration and torsion of the racket rod.

AC counterweight

AC precision counterweight system can accurate racket carbon fiber distribution and weight ratio more even and balanced, with stronger explosive power.

Y JOINT reinforced frame

The connection between the racket shaft and the racket frame adopts a "Y" shape, which fully utilizes the advantages of the high-torsion resistant linkage T head, and further improves the torsion resistance of the racket surface.

REINFORCED CORE

Shaft formed twice with inner and outer rings. Inner core is made of dense carbon fiber, and shaft with such inner core has more powerful and stable character, which effectively improves shaft reset speed.

ATTACK GAIN SYSTEM

The racket smash modeling design not only ensures the lightweight of the racket, but also keep the rackets pressing force and wind breaking function, so as to enhance the racket smash power

HIGH ELASTIC SHAFT

With high elastic carbon fiber, the shaft of racket has good rebound performance, which can improve hitting feel when smashing.

SUPER LIGHT TECHNOLOGY

Use high quality carbon fibre with high intensity to ensure the racket is both lightweight and strong. The ultra-light racket helps to improve player response time.

OVERSIZE FRAME

The first patented racket in the industry, the sweet spot is 23% larger than common one, which helps users capture shuttlecocks effectively.

TECHNOLOGICAL MATERIALS OF RACKETS

The newly developed vacuum pressure high temperature molding process in 2020 breaks through the traditional racquet molding method. The racquet is molded in a vacuum box to avoid the mixing of air bubbles when high-quality carbon fiber is combined with nano-resin. The carbon fiber of the racket is tighter, the power transmission is clearer and the loss rate is lower, which effectively improves the explosive power of the racket.

By using super high polymer into frame inner instead of traditional pressure expansion, the high polymer is transformed to strong inner power with cushioned structure under high temperature and pressure, and inflation pressure, which can effectively improve racket strength, and with more stable hit, and reduce racket vibration frequency as well.

Imported Japanese Toray dense carbon fiber, with smaller deformation character, preventing carbon fiber viscosity, combination, and surface defects, which largely increases overall strength and toughness of the racket, and effectively reduces racket broken rate, and with better hitting sound.

This Racket has added fullerene carbon to reinforce the frame. Fullerene is a newly discovered industrial material, with its stiffness even stiffer than diamonds, and Ductility and Malleability are 100 times higher than steel. Rackets with Fullerene carbon are stiffer, less torque, and with faster rebound speed and sharper hitting sound.

Graphene is a kind of hard material, and the shaft made by it with carbon fiber has high elasticity and toughness properties.

In the stress concentration area of the racket, the "KRAIBON" cushioning damping material from Germany is applied to help buffer and disperse the excessive force to carbon fiber layers and improve its high tension ability. The excellent shock absorption performance of the material also helps to improve the aftershock frequency after the racket smash and improve the comfort of the racket.

The best high-density carbon fibre material available. It has superior mechanical properties, high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

Special high-density carbon fibre with superior mechanical properties: high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

High-density carbon fibre with superior mechanical properties: high coefficient, high modulus, light weight, fast vibration attenuation, high sensitivity, strong rigidity and torsion resistance index.

Lightweight and high strength carbon fibre. Provides superior strength for the racquet while doing so by controlling the weight of the racquet.

Dongbang highly carbon fiber can be more flexible when impacted, and has higher strength than ordinary carbon nanotubes. It also has toughness and elasticity, and can play a strong and resilient resilience. The shaft of the racket rebounds strongly and exerts force rapidly.

Graphene is one of the world's thinnest and most rigid nano materials, representing the world's leading scientific and technological crystallization. The racquet frame makes use of the optimal combination of graphene and carbon fiber technology to greatly enhance both the strength and resistance of the racquet.

Carbon yarn is made by hotmelt technology to help make the nano resin more evenly distributed.

Resin materials at a nano level are used to allow the fine particles to penetrate into the gaps of the carbon material evenly. This strengthens the structure of carbon material to make the frame of the racquet withstand greater pull.

By selecting material with different physical properties to balance rackets stiffness and toughness, and improve its comprehensive performance.

Mitsubishi high-strength and high modulus carbon fiber has balanced modulus and strength performance. The racket made of Mitsubishi high-strength and high modulus carbon fiber is rigid and flexible, brittle and elastic, and has excellent comprehensive performance.

TAILIN carbon fiber, which needs higher carbonization temperature, finer spinning and longer oxidation time, and which has the characteristics of lightweight and high strength, ensuring that the racket is lightweight and has high strength and rigidity at the same time.

Graphite microcrystalline fiber combining with new generation epoxy, with stronger tensile modulus ratio and strength to withstand rigorous dynamic testing (such as high temperature and high tension, hitting, dropping) to ensure the racket durability.

2 IN 1 Frame: Racket frame 5 and 7 O'clock uses wind-breaking type to reduce resistance during smashing, and head frame adopts box type to increase potential energy for smashing. Racket frame can bear maximum 35 lbs tension stably.

High polymer nanoscale hot melt glue is easier to penetrate into the internal structure of carbon fiber than traditional hot melt glue, and fully bonding the carbon fiber to make the overall structure of the racket tighter and stronger.

Aircraft-grade woven materials. It is woven with high modulus coefficient of carbon fiber and nano-epoxy resin. The technology provides the racquet with superior stability and allows the racquet to be at equilibrium at all angles of force.

Clothing Materials Technology

TOPCOOL is a type of high performance polyester fibre. It takes advantage of fabric fibre structure to quickly drain and absorb moisture and keep the surface dry and comfortable. TOPCOOL helps to regulate body temperature.

CoolPass is a type of profiled wicking polyester fibre having built in grooves. The fibre groove structure helps drain sweat faster and keeps your skin dry and more comfortable.

BLCool is a special type of fibre with superior draining function. This is possible by making use "cross" shaped internal fibres, ensuring dry feel and comfort.

CoolNice is a type of fibre designed with four-groove unique cross section and permanent wicking function. This is done by successfully applying the capillary principle to the textile surface to help accelerate absorption and evaporation of sweat. The high-profiled fibre cross-section structure also reduces the contact area with the skin providing a more comfortable feel.

Lenzing Modal® branded fibres from the house of Lenzing are naturally soft on the skin and exceptionally ecological. The fibres are produced using Edelweiss® fibre technology. Edelweiss stands for a "symbiotic" production process - pulp, the raw material, is produced at the same site as the Modal fibre itself.

Since its invention nearly sixty years ago, LYCRA® fibre set the standard as the world's best-known elastane fibre brand. Lightweight and nearly invisible, LYCRA® fibre became the active ingredient in our clothes and revolutionised the way we wore them. Whenever it's used in fabrics, LYCRA® fibre transforms garments into better fitting, durable clothes that move with our bodies, delivering fit, shape and comfort that lasts.

3M™ Scotchlite™ reflective material helps you to be easily visible in dim light conditions.

Three-dimensional Sewing
Enhances overall comfort.

Sweat-absorbent & Quick-drying

BREATHABLE

Breathable Fabric
Fabric offers good internal air circulation allowing for better body temperature regulation and comfort.

High Elastic Fiber

High Elastic Fiber
Fabric consists of elastic fibres, with excellent elasticity to ensure for an easy fit.

soft

Soft Printing
Comfortable without the rigid feel of conventional hard prints.

laser

Laser Engraving
Accurate designs that do not affect the function or form of the fabric.

Bright Fabric

Bright Fabric
Bright colours to ensure high visibility.

Light Fabric

Light Fabric
Superior light and comfortable fabric.

Windproof Fabric

Windproof Fabric
High quality windproof materials to ensure warmth.

Thermal Properties

Thermal Properties
Contains thermal warmth properties for cold environments.

Static Electricity Prevention

Static Electricity Prevention
Helps prevent static electricity in winter.

Washable

Washable
The garment can sustain standard washes without deformation or fading.

SHUTTLECOCKS

Details determine success or failure

Details determine success or failure

1 Manufacture according to extremely fine and strict production process to make sure that each badminton weights the same

One of the basic requirements to badminton ball is the suitable weight, or the player could not fully exert his skills.

2 Strictly implement the badminton international standard size so that you could exert best in the game.

The speed of badminton ball has great relationship with its weight and caliber size.

After the test, in the same environment, when badminton is about 8.3 cm long and the aperture size is about 6.5 cm, the ball has the most ideal speed.

3 The unique glue formula to ensure the resistance to fight and flight stability.

Kawasaki badminton has much glue and strong enough to ensure it is durable.

But common badminton has little glue and not strong enough to play.

4 The whole raw footage and the ball head are coaxial to be sure the ball flies more stable.

The whole raw footage and the ball head are coaxial, which is the base to ensure the badminton flies stable.

5 The feather is arranged neat

All pieces of feather are in the same length and evenly spaced to ensure the flight is more stable.

6 Finely manufactured with proper glue covered to strengthen the performance of the resistance to fight and flight stability.

Coil is meticulous and tidy

7 Choose thick and strong feather for each piece of Kawasaki badminton.

The tether is thick and strong

9 Sheepskin membrane and ball head inside are wrapped solidly

White fixtures is glue

The head of ball is wrapped with sheepskin membrane to make the feather more tight, which is sure of the ball is durable.

10 There are multi head for Kawasaki badmintons to choose to adapt to the needs of different players.

Different types of ball heads to meet different requirements.

11 In the whole head of ball, ratio of the cork and the fiberboard is the best ratio of the head, which could allow the badminton play a good role in elastic and durable.

The ball head is standard sphere to ensure the stability of flight and avoid swing.

Name	Badminton strings
Color	<input type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Length	10m
Gauge	0.61mm/0.65mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	High shrinkage elastic multifilament fibers
Advantages	Moderate elasticity and feel Sound well when hitting Smooth surface, easy for strings

KSB-65TI

Name	Badminton strings
Color	<input type="radio"/> <input type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Length	10 m
Gauge	0.68 mm
String core	High strength elastic multifilament fiber
Surface	Superfine elastic multifilament woven fiber bundles
Drape	Novel hydrogen titanium alloy and elastic resin
Characteristic	The high strength elastic multifilament fiber as the base line center, the outer material is the superfine elastic multifilament woven fiber bundles, with excellent elasticity, crisp and strong ball hitting sense, the coating layer adopts hydrogen titanium alloy technology, providing first-class shock absorption, wear resistance and high elasticity.

Advantages Added with titanium alloy coating, the flexibility is excellent
Superior material technology brings excellent feel
Ball hitting sound is loud and clear
Suitable for violent attacking players

KSB-68

Name	Badminton strings
Color	<input type="radio"/> <input checked="" type="radio"/>
Length	200m
Gauge	0.70mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	High shrinkage elastic multifilament fibers
Advantages	Moderate elasticity and feel Sound well when hitting Smooth surface, easy for strings

KSB-80

Name	Badminton strings
Color	<input type="radio"/> <input type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Length	10 m
Gauge	0.68 mm
String core	Strong flexibility multifilament fiber
Surface	Special flat monofilament fiber mixed with ultra-elastic fibers
Drape	wear-resistant elastic resin
Characteristic	The core basically made with systolic high strength elastic filament fiber, the outer with special flat monofilament fiber to cross weave in average, the special material can provide the high elasticity and sonorant performance, the outermost layers, with resistance to impact and friction of elastic resin to complete only the surface.

Advantages Light & thin, easy for strings.
Top material elasticity and sound well.
Strong rigidity & uneasy retreat tension strings.

KSB-68

Name	Badminton strings
Color	<input type="radio"/> <input type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Length	10 m
Gauge	0.70 mm
String core	High tension multifilament fiber
Surface	Super tenacity multifilament fiber
Drape	high shrinkage elastic multifilament fibers
Characteristic	Core of the string with high strength of Multifilament fiber, outer with strong multifilament fiber as the double cross woven, and provide excellent elastic feedback, the outer covering, the elastic resin impact resistance and friction resistance to surface coating

Advantages Good durability, suitable for cold weather, Strong rigidity & uneasy retreat tension strings Multifunction, suitable for beginners & professional players

KSB-60

Name	Badminton strings
Color	<input type="radio"/> <input type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Length	10 m
Materials	0.72 mm
String core	Nylon multifilament yarn
Surface	Elastic nylon multifilament
Drape	Sliding nano elastic resin
Characteristic	The center core made of ultra strong multifilament, its durability greatly improved after compression, the outer layer with a plurality of elastic filament cross woven, the outermost layer using "nano" elastic resin, makes moderate performance for hitting sound and feed-back strength.

Advantages Moderate elasticity and feel.
Sound well when hitting.
Smooth surface, easy for strings.

PROFESSIONAL MASTER LEVEL KES-850 BADMINTON COMPUTER CONTROL STRING MACHINE

KES-850 Computer automatic tennis badminton rackets string machine

Specification : Tennis badminton universal synchronous frame racket, three-claw badminton fixation frame racket system, computer-direct tension type, patent removable electronic box, induction type bead clip starting switch, screw synchronous frame racket adjustment system, low profile aluminum alloy foot bottom plate, semi hidden drawer, adjustable turntable damper.

Patent : Patent gyroscope pull wire wheel, adjustable frame racket rotating disc damper, patent simultaneously movable frame racket middle column screw, adjustable angle type frame supporting seat, patent automatic elastic open wire clip base, lightweight aluminum alloy tripod group, patent quick release type tennis badminton changing system, electroforming type diamond sand clamp.

Characteristic : The screen is digital LCD blue display, and the subtitles are clear, not affected by external light, which can record the wire pulling number. The pound is controlled by computer, which is accurate, the push-button type pound correction is easy to operate. The pounds can be set quickly, which can be from 11 pounds to 88 pounds, 9 pounds of pounds memory. The wire pulling speed is divided into a variety of speed settings: 10%-100%. Can set a variety of wire extension functions 0%-20%. A special button for knot tying is set. Straight line and horizontal line special setting button. Induction type bead clip starting switch, easy to operate and durable. Function of automatic detection of faulty items. Machine head external discharge type electronic box. Universal power supply, applicable voltage of 110v-240v.

KES-900 Badminton and Tennis Bifunctional Intelligent Stringing Machine

Specification : Tennis and Badminton general frame, Intelligent-straight pull type, patented detachable electronic box, pull-head touch button, low outer aluminum alloy bottom plate, semi-hidden drawer, adjustable turntable damping, external adjustment gravity clamp base.

Patent : Patented gyro stringing reel, adjustable frame oscillating damper, adjustable angle frame support, patented automatic pop-up clamp base, lightweight aluminum tripod, high-sensitivity touch button, patented retractable Turntable pillar, free hand-adjustable gravity clamp base.

Characteristic : LED operation panel, intelligent control stringing puller, accurate pounds, easy to correct pounds; Accurate tension setting, from 11-45LB (5-20KG), precision of 0.1LB/KG, 4 sets of pounds of memory; Kg/lb quick change button; The three-speed stringing speed can be selected, and there is a special button for knotting; The string function (10% 20%) that eliminates the string tension can be set to use different string to avoid tension dropping. Accurate tension setting, 11-89LB (5-40KG), precision of 0.1LB/KG, 9 sets of pounds of memory. High-tech hard anode surface of the string clamp, good clamping force and not easy to hurt the string, suitable for various specifications of string diameter; Gear brake turntable system, fast and stable; Independent telescopic boom system, which can adjust the telescopic arm separately to the safest six-point fixed to prevent the racket deformation; Can be racked from the largest tennis racket 135 square inches to the smallest badminton racket; The height of the machine can be adjusted from 90cm to 120cm; Machine external discharge electronic box, general power supply, suitable for voltage 110V-240V.

Movable pole

Model:	KBP 03
Materials:	Iron
Color:	Yellow
Height:	155cm
Specification:	49 x 30 x 10cm
Weight:	80kg

Movable pole

Model:	KBP 08
Materials:	Iron
Color:	Yellow
Height:	155cm
Specification:	48 x 34 x 11cm
Weight:	160kg

Badminton court

Model:	KPL 4.5
Grain:	Lichy type
Color:	Green
Thickness:	4.5mm / 5.0mm
Specification:	1.8m x 15m / 4 slice (7.2m x 15m)
Weight:	90kg x 4

Surface: PVC surface anti-skid, wear-resistant, comfortable, suitable for professional badminton tournament.

Middle: Special spinning process, 100% polyester fiber fabric, water absorption, prevent deformation.

Under layer: High resilience

Badminton court

Model:	KPS 5.0
Grain:	Crystal
Color:	Green
Thickness:	4.5mm/5.0mm/6.0mm/7.2 mm
Specification:	1.8m x 15m / 4 slice (7.2m x 15m)
Weight:	110kg x 4

Surface: PVC surface anti-skid, wear-resistant, comfortable, suitable for professional badminton tournament.

Middle: Special spinning process, 100% polyester fiber fabric, water absorption, prevent deformation.

Under layer: High resilience

Badminton net

Model:	B10
Materials:	Nylon
Color:	Brown
Mesh size:	1.8 x 1.8cm
Specification:	610 x 76cm
Weight:	380g

Badminton net

Model:	B11
Materials:	Polyester
Color:	Brown
Mesh size:	1.8 x 1.8cm
Specification:	610 x 76cm
Weight:	380g
